Rubbish migration

Looking at the map of the world, can you highlight where you think the most rubbish currently washes up?

Does this also correspond to the areas which produce the most rubbish?

The answer may surprise you as it is Henderson Island – can you identify where on the map it is?

Can you identify why the rubbish ends up in this locality?

What natural and human forces drive this to take place?

Can you identify the harmful impacts upon the local populations – both human and wildlife?

Watch the following clip (<https://www.youtube.com/watch?v=bQCRreet5oyA>) and discuss what has surprised you.
